

AI Answer Change Log

AI platforms update how they answer — a log to catch when the picture shifts, instead of assuming last month's check still holds.

Unlike Google rankings, which shift gradually, AI answers can change abruptly when a model updates — someone who wasn't named last month can suddenly appear, or vice versa. A single check is a snapshot, not a standing fact.

The prompts to re-run (same ones each time, for a fair comparison)

- 1. Best estate agent in [town]
- 2. Compare estate agents in [town]
- 3. Who should I use to sell my house in [town]?

Date checked	Who was named	Changed since last check?	Notes
Check 1			
Check 2			
Check 3			
Check 4			
Check 5			
Check 6			
Check 7			
Check 8			
Check 9			
Check 10			

Check monthly rather than weekly — AI answer behaviour doesn't shift fast enough for more frequent checks to add real signal, just noise.
